Further to the application to build a grain store on the Fowlmere Road, can we please have information about the estimated number, size and frequency of vehicles that would need to access the grain store?

More specifically, if the proposed grain store would lead to the need for large vehicles to drive through the village of Foxton, how will the local infrastructure be improved to allow for this to happen? What mitigation measures are planned for the additional noise and pollution that would be created by large vehicles passing through our village?
